

TO ALL **GOLD COAST** RESIDENTS

This is Our Water Future!

Nowhere on Earth Deliberately Uses Sewage as Drinking Water

- **Scientists Warn** that people will die, especially babies, young children, people with suppressed immune systems and the sick and elderly;
- **CSIRO** says antibiotics, viruses, sex hormones, anti-depressants and cancer drugs cannot be removed from sewage;
- **Medical Catastrophe** – kidney failure, hormone disruption, cancer formation, spontaneous abortions, birth defects and more!
- **Doctors Warn** – Drinking recycled sewage causes girls reaching puberty age 3, genital deformities, feminising of boys, testicular cancer and miscarriages.

Contaminated Water Cannot be Decontaminated

“Louis Pasteur said over 150 years ago that we drink 90% of our illnesses.”

DOWNLOAD FREE WATER REPORT ON THE HEALTH HAZARDS OF 100% RECYCLED SEWAGE GOING INTO DRINKING WATER SUPPLY. The Queensland Government plan to bring this new untested system to the Gold Coast in the biggest drinking water experiment in the world. Time is short. **Act NOW!** WRITE A LETTER. SIGN THE PETITON. **HELP DEFEND OUR WATER!**

“We the People do NOT Consent”

SCIENTIFIC WARNINGS

Dr. Don Bursill, who developed Australia's Drinking Water Guidelines said that he, "Would not drink recycled sewage and would not back its use." He warned, "People could die if the system failed or there was an outbreak of disease. There are too many risks for this practice to be introduced. Present systems are not adequate to cover the risk of bacterial contamination." <http://www.news.com.au/adelaiddenow/story/0,22606,21132904-5006301,00.1.html>
http://www.blogtoowoomba.com/entry.php?w=toowoombawatervote&e_id=567
<http://waterrecycling.blogspot.com/2007/06/prof-don-bursill-on-human-error.html>

Professor Peter Collignon (Director of Infectious Disease and Microbiology at Canberra Hospital) warns, "Recycling sewage for drinking carries a major risk of outbreak of disease... It has the potential to affect 100's of thousands." He warned that, "Historically, keeping sewage from drinking water had been a major cause of public health improvement – but now instead of separating it, they will physically put it back in." <http://www.abc.net.au/water/stories/s1922096.htm>

Antoine Frerot, the CEO of Veolia Water, has serious doubts about drinking water recycled from effluent. Veolia owns over 100 sewage treatment plants worldwide, but none of them are designed for drinking the treated sewage. Author: Senator Barnaby Joyce
<http://www.qld.nationals.org.au/news/default.asp?action=article&ID=1512>

CSIRO admits that membrane filtration is not fully understood and that some molecules penetrate the nano-metre scale barriers. The science of micro contaminants is far from complete. They believe that, "Sewage is the

ultimate witch's brew." It includes all manner of illicit drugs such as 'ice' in human excretions. As over 80,000 synthetic chemicals and 1,800 new chemicals each year since 1930 have been released, it is well beyond the current capacity of health and environment authorities to test for and remove these from sewage. (Ref: CSIRO Sustainability Network 5th June 2007 Sustainability Network Update – No. 66E)

MEDICAL CATASTROPHIES

- **Hormones** in British and European recycled drinking water are causing young girls to hit puberty at three years of age and to cause infertility and testicular cancer in males. <http://www.news.com.au/couriermail/story/0,23739,23054324-23272,00.html?from=m...>
<http://waterfutures.blogspot.com/search/label/Windhoek>

- **Genital Deformities** in newborn males have also been linked to hormone disrupting chemicals. Professor John Aitken, Head of Biological Science, Newcastle University says his research suggests that oestrogenic by-products in reused drinking water damage male fertility with resultant cancers. Paediatrician Dr. John Cox also agrees. <http://waterfutures.blogspot.com/search/label/Windhoek>

- **CSIRO** scientist, Cohn Creighton admits that there are no tests available to detect new pharmaceuticals such as the abortion drug RU486 (the morning-after pill) in reclaimed sewage. <http://waterfutures.blogspot.com/search/label/Windhoek>

- **Organochlorines** found in fertilizers, petro-chemicals, solvents, PCBs, insecticides and dioxins cause foetal deformities, genetic defects, cancer and even death. They bioaccumulate in our bodies to highly toxic levels.

● **Mad Cow Disease** is caused by prions, which are described by Dr. Frederick Murphy, Dean of the School of Veterinary Medicine, University of California as, "The most bizarre infectious agents ever imagined." Humans contract it from meat or blood from the infected cattle. In humans it's called vCJD. It has a long incubation time and is fatal. Our Red Cross refuses blood donations from anyone who lived in Britain from 1980 onward. They speculate that a great number of people currently have prions in their blood. Prions cannot be detected in blood, even by modern technology, and have no chance of being detected in recycled sewage.
<http://waterfutures.blogspot.com/search/label/prion>.

WHAT'S IN RECYCLED SEWAGE?

● **New Waterborne Pathogens and Viruses** continue to emerge in drinking water despite modern treatment technology. They have the ability to penetrate micro-filtration systems and are resistant to most other conventional treatments. These include: Microsporidia (found in AIDS patients, also, Giardia and Cryptosporidium), Adenoviruses (49 different human types and the most resistant to UV light inactivation and the longest surviving in water), Parvoviruses (cause gastroenteritis and the most heat resistant), Coronaviruses (SARS – remains stable in faeces), Picobirnaviruses (gastroenteritis in AIDS patients), Circoviruses (found in people with hepatitis), Polyomaviruses (causes fatal disease known as PML, associated with colon cancer, kidney infections, is heat resistant and also found in the urine of healthy people).

● Over 87,000 known chemicals, over 11,000 manufactured organochlorines, 250 water borne viruses, 114 intestinal diseases, all

legal and illegal drugs, hormone disrupting chemicals, prions, helminths, parasites, bacteria, protozoa, radio-active material, non-biodegradable poisonous substances, heavy metals, petrochemicals, chemotherapy drugs, contaminated blood from animals and humans, morgue waste blood and tissue, waste nano-technology experiments, as well as all waste from scientific and medical experiments, wastewater from all industries, mines, hospitals, abattoirs, tanneries, all fertilizers and pesticides, toxic by-products from treatment methods, and the list is endless!

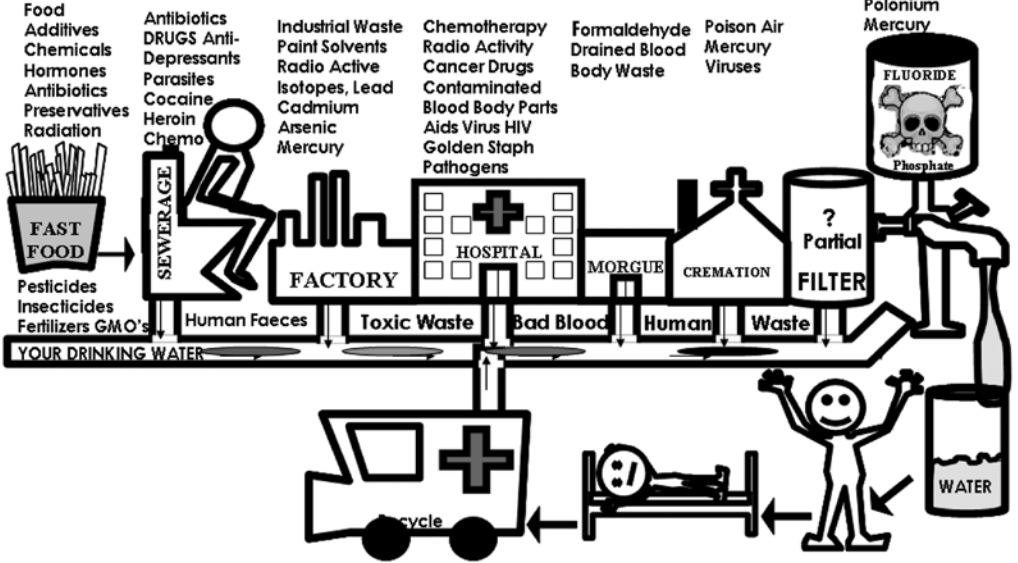

● Almost all substances found in sewage cause cancer, genetic mutations and disease. Some will accumulate in our bodies (even at minute doses) until we become poisoned by them or they affect the action of our internal organs.

● Some chemicals can have multi-generational mutation damage (eg: thalidomide, DEH) when ingested – what damage will happen to all future generations from the myriad of new chemical concoctions yet to be unleashed? The future is an unknown quantity.

● **Flouridation Chemicals are Toxic Waste**
Not many people know that fluoride is actually a highly toxic waste product of the aluminium and phosphate fertilizer industries, for whom disposal was once a serious problem. The base chemical in fluoride is used as a rat poison. The addition of it to our water supplies is a multi-million dollar industry at the risk to public health. Alarmingly our Queensland Premier has decided that we must have it added to our water supplies. We have not been given a choice. **We are being forcibly medicated!** In addition, when the fluoride is recycled back to drinking water via the sewage, it will bio-accumulate in the eco-system and our bodies... **A public health disaster!**

Our Future Life Cycle With Processed Sewage & Waste Water

What they will be allowed to put in our drinking water...

Peter Beattie. "It is not Government policy to place recycled sewage into dams." He called it an 'Armageddon alternative'.

Malcolm Turnbull. "There is simply no need to introduce recycled sewage into the potable water system."

Anna Bligh. "You will have it whether you like it or not."
